

SENEC

Your Life. Your Energy.

“Our power bill went from \$510 to \$70...”

We live in a large 5x3 with a pool. Most days we now only use around 4 units off the grid. At this rate we will pay our outlay within 5 years. Without SENEc you are literally wasting so much energy. If you are a high consumer like our family, SENEc just makes sense. Also, the SENEc App is amazing. If you have solar panels, get yourself a SENEc!

Rosalie Beveridge | Western Australia

“I saved \$250 within my first bill with SENEc”

I live in a 4x2 in Stoneville and I didn't realise that solar panels only become perfect with a SENEc system. Within just my first electricity billing cycle my power bill went from \$450 to \$200. That's a saving of \$250 already! Can't wait to see how much I save next time.

Mike Mahon | Western Australia

“My electricity bill went from \$250 to \$40”

I saved \$210 in the first month as compared to just solar panels. I live in a 3x3 in Adelaide and being green, independent of the grid and having such a massive reduction in my power bills is an amazing feeling and its all thanks to my SENEc. If you want to reduce your costs solar panels aren't enough. I HIGHLY encourage you to get a SENEc Solar Battery.

Dr Andrew Michael | South Australia

“My power bill went from \$700 to \$70. WOW!”

There was one cycle where my power bill was negative. Your solar panels are missing the bang for the buck without one of these. We have so much sunshine, it would be silly to not make the most of it with a SENEc Battery. Thanks to the SENEc app I know exactly how much power is being produced and used at all times. It really is an amazing product!

Wayne Spilsbury | Western Australia

SENEC

Your Life. Your Energy.

"We saved \$507 within the first billing cycle"

We live in a large 4x3 and the impact our SENEC solar battery is having on our power bills is significant over and above what we receive through REBS. Our bills went from \$800 to \$293.62. The My SENEC App is so good as I can see exactly how much energy we are generating, storing and using at any time.

Paul Duffy | Western Australia

"Got solar panels? You need SENEC ASAP!"

Our power self-sufficiency has increased a LOT more than just having solar panels. Our bills were around \$800 and within our first billing cycle was already 50% less than the previous bills in two months. SENEC fit so well into our home and doesn't take up much space. Got solar panels? You need to get a SENEC asap.

John Edmondson | Western Australia

"Very very happy with my SENEC battery"

I live in a house in Edgewater, Western Australia and even this a new addition to our home there is no doubt in my mind that I made a great decision getting a SENEC to go with our solar panels. I can already feel how this is going to benefit my home and save me money. I am very very happy.

Nigel Parker | Western Australia

"SENEC solar battery is the way of the future"

We used 808 units of power last September (\$291.84), and the most recent was for just 63 units (\$83.26). Our daily usage in September 2018 was 13 units, and it averages 1 unit a day now! I have recommended a SENEC battery to many friends and colleagues. Great for the planet and for reducing power bills, especially for a sun-blessed city like Perth!

Noel English | Western Australia
