

SENEC.Home E4

Flexible, efficient, compact

New

Highlights

All in one – a seamlessly integrated inverter, battery storage and energy management system.

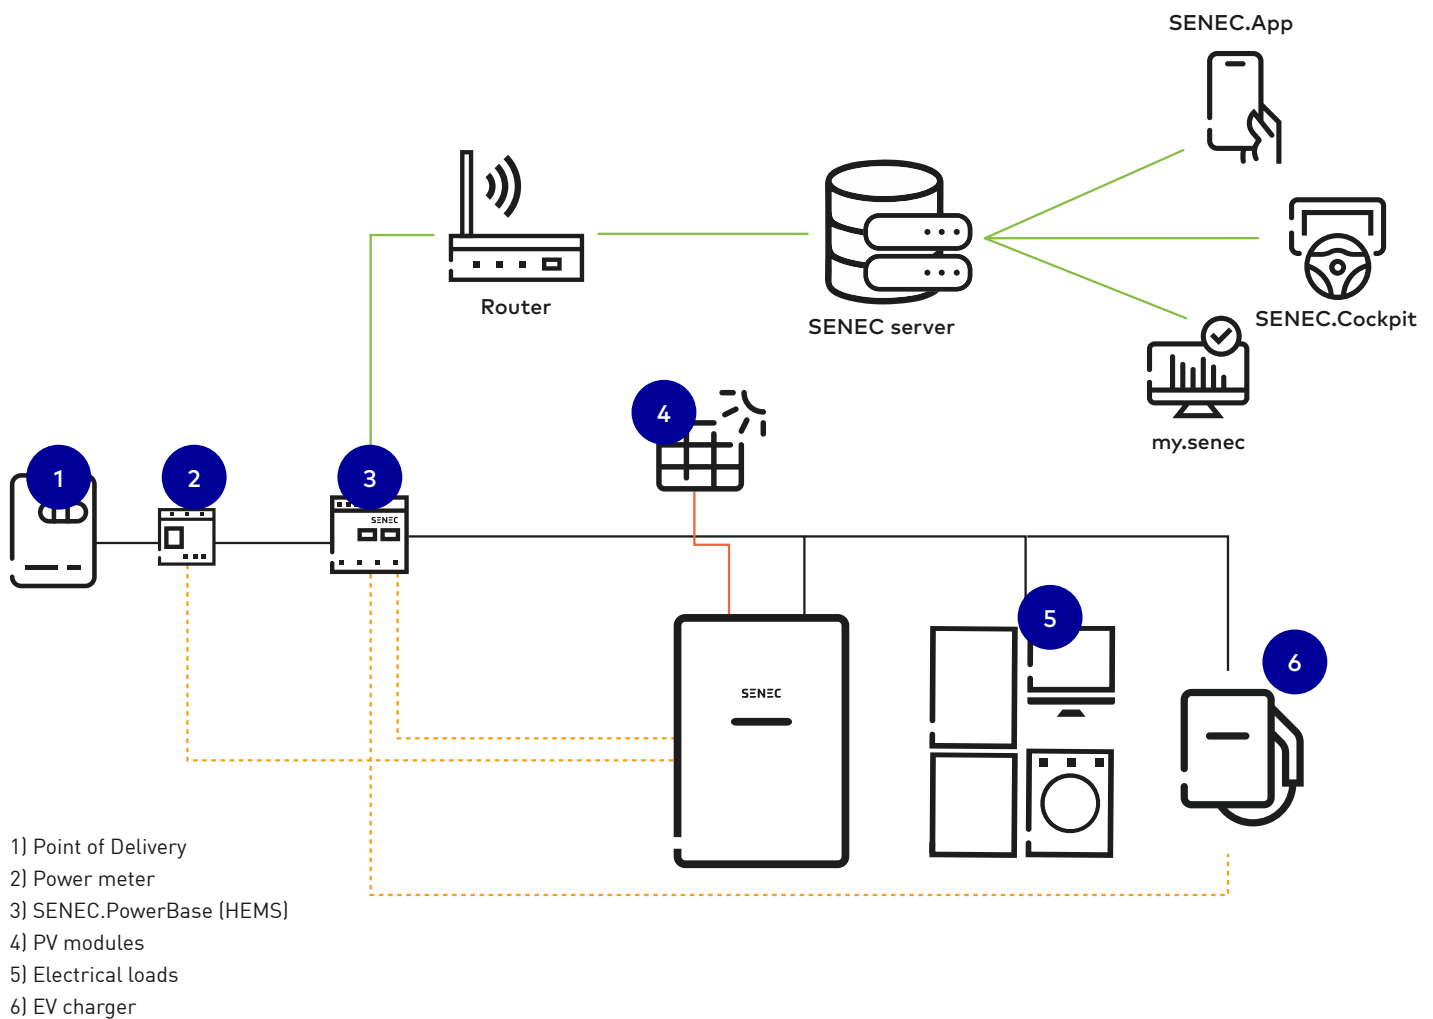

Hybrid battery storage system with up to 15 kWh capacity and optional backup power.

IP65 allows for outdoor installation.

Elegant and compact design. Easy installation.

Main features

- Hybrid or AC version for both new and existing photovoltaic systems.
- Modular storage capacity from 5 to 15 kWh.
- Excellent price-performance ratio.
- Quick and easy installation thanks to new configuration wizard and plug&play design.
- IP65 protection allows for both indoor and outdoor installation.
- Two MPP trackers.
- Optional backup power system up to 6 kW with automatic grid reconnection.
- System monitoring and remote maintenance via the new SENE.Cockpit portal.
- Visualisation and control of energy flows via SENE.App.
- Equipped with SENE.PowerBase, the intelligent energy flow management system that maximises self-consumption of the PV power produced.

360° leader

With more than 170,000 battery energy storage systems sold, we are one of the leading players in the industry, offering a complete and comprehensive range of components for energy self-sufficiency.

Robust and reliable

As a national representative of EnBW, one of Germany's leading energy suppliers, we are a trusted partner for long-term cooperation, constantly providing customers with solid warranties.

Our commitment

We never compromise when it comes to the quality of our products or our customers' safety and satisfaction.
